Application/Control Number: 10/716,343

Art Unit: 3764

Claims 3-5, 7-10, 12, 16, 17, 19-25, 29-33, 36-47, 49, 50, 53 and 55 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 6, 11, 13-15, 18, 26-28, 34, 35, 48, 51, 52 and 54 are rejected under 35 U.S.C. 102(b) as being anticipated by Holmes.

Holmes discloses a device comprising first and second struts (12, 13, 25 and 26), rotatable legs 7 and 8, and collars (12 and 13) (applicant is reminded that the lower support leg is not being claimed as attached to the first support strut only that it extend therefrom.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 52 and 53 are rejected under 35 U.S.C. 103(a) as being unpatentable over Holmes.

Holmes discloses a device having an elastic member as a portion of locking means a first strut and a rotatable support leg.

Holmes however does not disclose his device wherein the elastic member is situated on the first strut and bear against the support leg to resist motion of the support leg. Art Unit: 3764

Holmes however does disclose an elastic member wherein the elastic member is situated on the leg member of his device and the elastic member bears against a first strut.

Given the above teaching of Holmes of elastic mechanisms bearing against attached rotatable members. The examiner notes that a reversal of components wherein the elastic member is situated on the strut member would have been obvious to one of ordinary skill in the art so long as the rotatable resilient locking of the leg member remained functionally same in the current device of Holmes.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Note the overall device of Harmon Yu Fenner, McPhilomy, and Padula Od ll et al

Any inquiry concerning this communication should be directed to Jerome Donnelly at telephone number (571) 272-4975.
